

NCP-AIN AI Fabric Pro Mega Lab Quick Start

1. Use These Files First

- ``docs/NCP-AIN_AI_FABRIC_PRO_MEGA_LAB_topology_2_poster.pdf``
- ``docs/NCP-AIN_AI_FABRIC_PRO_MEGA_LAB_quick_start.pdf``
- ``docs/NCP-AIN_AI_FABRIC_PRO_MEGA_LAB_workbook.pdf``

2. Node Types

- ``RR1``, ``RR2``, ``SPINE1``, ``SPINE2``, ``LEAF1-4``, ``BL1``, ``BL2``, ``PE1``, ``PE2``, ``REMOTE-DC`` are EOS switch/router nodes.
- ``GPU-A``, ``GPU-B``, ``GPU-C``, ``STORAGE``, ``COLLECTOR`` are Ubuntu VMs.
- Cluster networks are dual-stack in the lab: IPv4 and IPv6.

3. Build Order

1. Import ``topology/NCP-AIN_AI_FABRIC_PRO_MEGA_LAB.unl``.

2. Boot EOS nodes.

3. Paste configs in this order:

- ``SPINE1``, ``SPINE2``
- ``RR1``, ``RR2``
- ``LEAF1``, ``LEAF2``, ``LEAF3``, ``LEAF4``
- ``BL1``, ``BL2``
- ``PE1``, ``PE2``, ``REMOTE-DC``

4. Save running config.

5. Boot Ubuntu VMs.

6. Run:

- ``sh GPU-A.sh``
- ``sh GPU-B.sh``
- ``sh GPU-C.sh``
- ``sh STORAGE.sh``
- ``sh COLLECTOR.sh``

4. First Checks

- ``show ip ospf neighbor``
- ``show bgp evpn summary``
- ``show mlag``

- ``ip addr show bond0``
- ``ip -6 addr show bond0``
- ``cat /proc/net/bonding/bond0``

5. First Traffic Test

- On ``GPU-B``: ``iperf3 -s``
- On ``GPU-A``: ``iperf3 -c 172.16.110.12 -P 8``
- On ``GPU-A``: ``ping -c 3 -M do -s 8972 172.16.110.12``
- On ``GPU-A``: ``ping6 -c 3 2001:db8:110::12``
